Margins on the Motorway: Registering Mobility in the Urban Interstitial Landscape

Victor Trujillo, RLA

Landscape Architect

Victor Trujillo is a capable and broadly experienced design consultant, with a BA from the university of Southern California and an MLA from The University of New Mexico. His interests in public space and sustainable design inform his understanding of the environments we live in.

He is an advocate for the development of vibrant public spaces, and believes in the ability of place-making to engage, connect and nourish. He values creative, responsible and context-sensitive design practices, engaging these principles through his work on both private and public-sector projects. Victor integrates his technical and artistic background with low impact design techniques to create landscapes that reflect local character and values, while his strong understanding of project needs and graphic communication results in a systematic approach to design and construction documentation. His portfolio includes master plans, streetscape improvements, transportation projects, playgrounds, educational landscapes, and environmental graphics.
